Inherent is a provider of sophisticated Web Services for professional corporations. Inherent has been a pioneer since 1992 in Internet-based client relations tools for the legal profession. We've been designing, building, hosting, and maintaining Web sites and services since the inception of the commercial World Wide Web.

Today, Inherent specializes in database-driven, dynamic content technologies that enable you to serve the latest content "on-the-fly." The real benefit is your content is no longer cast in stone with an army of "web programmers" required to alter a page.

Our international clientele, consists of many of the "AmLaw Top 250" law firms, leading legal publishers, Bar associations and similar member-based professional organizations, as well as other specialized professionals who require highly tailored web-services for their own customers and clients.

1995
Inherent.Com launched a cutting-edge, online database integrated membership directory for the American Bar Association.

1995
Inherent.Com pioneered the use of extranets in the legal community.

1996
Inherent joined forces with Martindale-Hubbell and created an innovative marketing alliance to provide online solutions for the legal community.

Originally founded in 1993 as Inherent Technologies, Inherent, Inc. has established itself as a leading provider of Web-related services for professional organizations. Based in Portland, OR, Inherent develops and hosts corporate Web sites, Intranets, and Extranets for clients in highly specialized service industries, primarily law firms and legal professional associations. Inherent also offers expertise in network infrastructure and security. With over 200 clients, Inherent, Inc. is a proven leader in the field of Web development.

Special

After developing a site for the American Bar Association, Inherent established relationships with several state bar associations, legal information publishers, and over 160 law firms in the U.S. and abroad, including several top firms listed on the NLJ 250. Inherent has also expanded to include organizations outside of the legal profession, including publishing, financial services, and high technology.

In 1996, Inherent, Inc. and Martindale-Hubbell® entered into a strategic marketing agreement to promote and develop Web sites for law firms worldwide. As Martindale-Hubbell's exclusive Web partner, Inherent, Inc. developed Web sites for firms of many sizes. The Alliance ended in early 2002, leaving Inherent free to work directly with all of the top-rated firms in the country.

Today, Inherent, Inc. offers various Web-hosting and development packages, such as Dynapsis, a suite of products which include database-driven Web applications, e-mail discussion groups, hosting and co-location, and comprehensive beginning-to-end Web design and maintenance. What does all this mean? Simply that we can offer you one of the best services possible.

One of Inherent's greatest assets is its talented and focused team of employees.

what our clients say

"A few months ago we received a new client solely because of our Website.

The client was "surfing" the net looking for a Farmington Hills law firm with expertise in real estate, and he came across our firm, and my biography. Since he was impressed with our Website, as well as our legal expertise, he gave me a call. We met, and he became a client of the firm."

READ MORE ABOUT OUR WEB PACKAGES

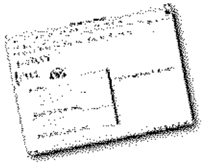
Inherent, Inc. excels at building Web sites. As one of the nation's leading developers of large, complex Web sites for the legal professional community, Inherent, Inc. has a reputation for developing polished Web sites that are built according to open technical standards and high-quality graphic design.

As an Internet strategy consultant, Inherent, Inc. understands how to develop Web-based solutions to solve your business needs. Whether you need a Web site, an Extranet, Messaging Services, or a combination of several items, we can implement a custom solution that will make you wonder why you waited so long.

For more information on possible solutions, follow the links below, and remember that Inherent's marketing team is ready to help you determine your organizational needs.

- *Dynapsis*™: Inherent's Online Content Management System
- Net.Presence: Static Web Development
- Proposal Generator
- Custom Dynamic Applications
- Extranet Services
- Intranet Services
- Flash Design & Development
- Streaming Video/Audio
- Hosting Solutions

"Our extranet has not only given our clients an added perk, but more importantly, IT HAS GIVEN US THE STRATEGIC ADVANTAGE over other law firms. It is still a novelty for a law firm to reveal their technique and remove the mystery of practicing law right before a client's eyes. We have revealed ourselves to our clients by building an extranet.



In a time where competition is so great, this makes a huge difference to our clients when a law firm provides more than just an on-line brochure."

Nancy H. Joyce, Former Marketing Director

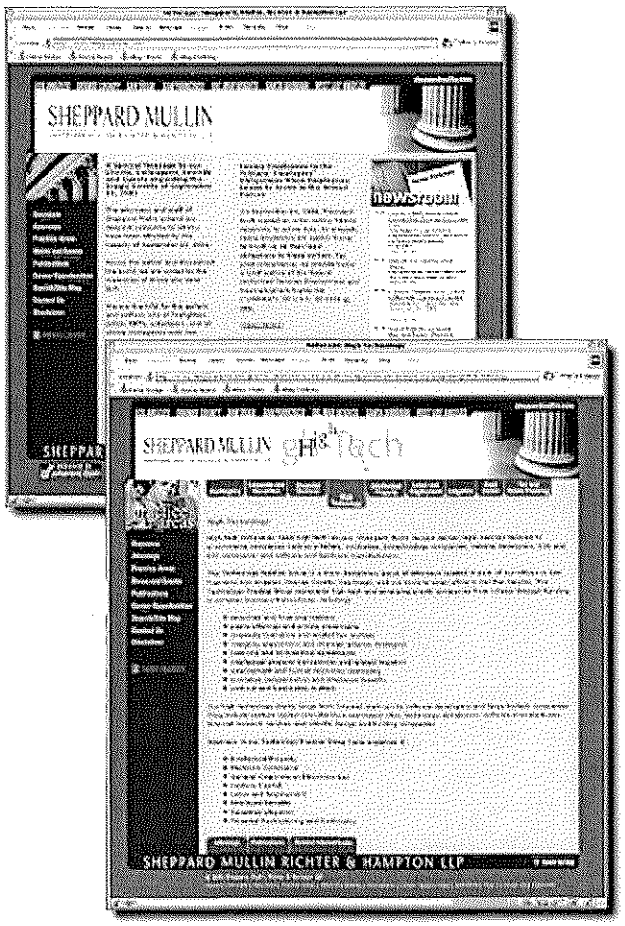
READ MORE ABOUT OUR WEB PACKAGES



Sheppard, Mullin, Richter & Hampton LLP

www.sheppardmullin.com

The Sheppard, Mullin, Richter & Hampton LLP (SMRH) Web site is a great example of a site that uses the latest in technology and design. Incorporating virtually each of our Dynapsis applications and the integration of the increasingly popular Macromedia Flash tools, the SMRH Web site is a perfect example of how functionality doesn't have to compromise design. SMRH simplifies their site structure for the user with their use of DHTML menus, coupled with intuitively organized content. The use of Inherent's Dynapsis database-driven applications allows SMRH to fully maintain the content of their Web site without having to employ a Web designer or pay recurring maintenance costs. This allows SMRH to easily keep their site content fresh, which will ultimately encourage users to visit their site on a regular basis.

Marger Johnson & McCollom, P.C.
www.techlaw.com

The law site for Marger Johnson & McCollom, P.C. is designed for the technically savvy. Using cutting edge Web technology, and taking advantage of bandwidth advances like DSL connections, techlaw.com takes its presence to the highest level of the Internet possible. This site is graphic intensive, and uses a higher variety and contrast of colors then the "typical" Law Firm Web site.

Navigator in the early 90s. Web sites were once simple text documents containing a few images. With several customized database applications, in particular their Continuing Legal Education extranet, SCCBA can do many things, including allowing individuals to register and pay for classes on-line, offering a legal practice resource center to members only, enabling members to renew and sign up on-line, sending out informational e-mailings to subscribers, and boasting an online e-store.

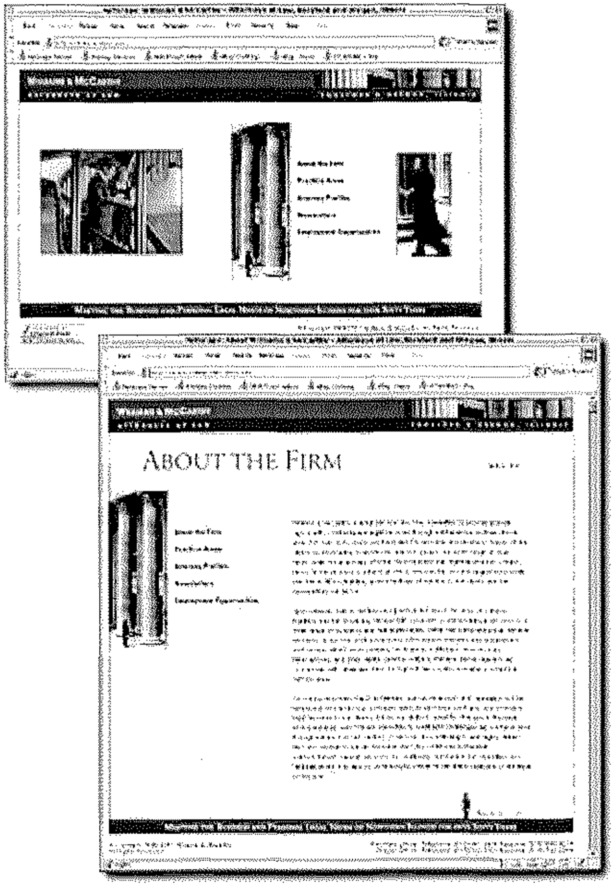
Many hours went in to the building of the SCCBA site, and SCCBA has the distinction of being one of the largest projects Inherent has undertaken since its conception in 1993.

Williams & McCarthy

www.wilmac.com

Williams & McCarthy established their online presence long before most law firms even considered building a Web site. Their 'first generation' site was well conceived, quick to download, and provided a substantial amount of firm information. But the World Wide Web stops for no one, and it came time for a redesign of their Web site. Incorporating cutting-edge technologies, and taking advantage of faster download times, Williams & McCarthy redesigned their site into a progressive Web presence.

With a fresh design and new architecture, Williams & McCarthy has continued to stay one step ahead of their competition and reposition themselves at the forefront once more.



Gibney, Anthony, and Flaherty, LLP
www.gibney.com

Many Inherent clients have used Extranets in their sites, but Gibney has taken theirs to a whole new level. Gibney's OWL uses the Internet to join together multiple parties to create a simplified and accurate means of communication, across phone/DSL lines, time

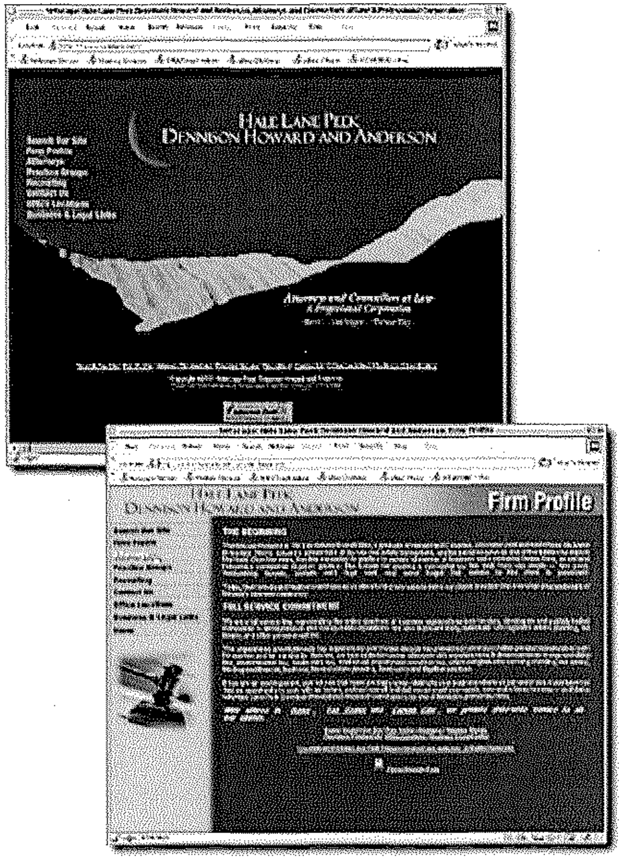
zones, and oceans.

Overall, the design of the Gibney site is intended to portray an international feel while showing their New York heritage. Features such as their navigational bar use mouseovers and the latest Web technology to make the site more dynamic and visually appealing. However, it's features such as OWL and other custom built databases that allow Gibney to elevate their site from a resource of firm information into the realm of an integrated aspect of the firm's daily business.

Hale Lane Peek Dennison Howard and Anderson
www.halelane.com

The homepage of Hale Lane Peek Dennison Howard and Anderson utilizes complementary colors, which emulates their print brochure and portrays the beauty of the desert.

JavaScript is used to change the photo at the bottom of the left hand navigational bar depending upon which main area is selected or moused over. For example, if the user mouses over "practice groups", a photo of the scales of justice is shown.



The content page of the Hale Lane site utilizes white text on a blue background, which poses a problem when a user wants to print the current page. The solution for this problem was to provide printer-friendly links that use a CGI-script to dynamically take the content of any page and deposit it into a new window with a white background and black text. The firm name is displayed at the top of each newly created page and there is a JavaScript tab at the bottom of the page that allows the user to close the new window.

The Hale Lane site shows how dynamic solutions, combined with a polished design, create a Web presence not to be ignored.
